KDC AGENTPAY

Autonomous AI payments

Mastercard AP4M × RLUSD × XRP Ledger

THE NEXT GENERATION OF MACHINE COMMERCE

THE PROBLEM

AI agents can buy services, but payment approval is still designed around people.

Repeated checkout interrupts autonomous workflows. Businesses need limits, accountability and verifiable settlement.

THE SOLUTION

Pre-authorize the agent, not every individual purchase.

KDC AgentPay checks each request against policy, initiates an AP4M payment and verifies RLUSD settlement on XRPL.

HOW IT WORKS

01 Agent discovers an approved API or service

02 Policy checks merchant, amount and daily budget

03 AP4M adapter initiates agentic payment

04 Authorized wallet submits RLUSD on XRPL

05 Agent verifies settlement and logs receipt

No per-transaction human approval inside pre-set limits.

SECURITY BY DESIGN

Merchant allowlist • Transaction caps • Daily budgets

Replay protection • Audit history • Emergency stop

Autonomy operates inside explicit financial permissions.

USE CASES

API and data purchases

AI inference and cloud resources

Machine-to-machine supplier payments

Enterprise workflow automation

Target users: developers, fintechs, enterprises and API marketplaces.

DEMO SCENARIO

Agent requests market-data API access: 0.25 RLUSD

Policy authorizes purchase

AP4M coordinates the payment request

XRPL confirms RLUSD settlement

Receipt and transaction hash appear in dashboard

Illustrative target demo — not a claim of completed live settlement.

BUSINESS MODEL

- Developer subscription tiers
- Enterprise orchestration plans
- Usage-based platform fees
- Managed integration services

Commercial model subject to partner agreements and regulation.

BUILD STATUS & NEXT STEPS

- Starter dashboard and policy-engine prototype
- Connect verified AP4M sandbox endpoints
- Configure RLUSD Testnet wallet and merchant
- Demonstrate one verified end-to-end transaction

AP4M API contract and live transaction proof still outstanding.

THE ASK

Mastercard AP4M sandbox access + API documentation

XRPL Testnet RLUSD liquidity and demo merchant

Hackathon mentorship and integration support
